# **DETAILED ACTION**

### Election/Restrictions

Applicant's election with traverse of Species I (claims 1, 4 and 7) in the reply filed on April 4, 2005 is acknowledged. The traversal is on the ground(s) of applicants allegation that figures 2, 4 and 5 correspond to Species II is noted. The examiner agrees that Species or Embodiment II is shown in figures 2, 4 and 5. However, this is not found persuasive in withdrawing the restriction requirement as the Species or Embodiments remain distinct as set forth in the previous Office Action.

The requirement is still deemed proper and is therefore made FINAL.

# Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 4 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kitazawa, JP 09065617 in view of Mimura, JP 02099399. Kitazawa, JP 09065617 shows:

An electric rotating machine for a vehicle (see figure 1) comprising: a rotor core 6 that is fitted to a rotary shaft 7; a stator core 3 that is concentric with said rotor core and disposed on the outside of said rotor core; and a turning angle detector (consisting of 8,9 and 10) that is disposed at one shaft end of said rotary shaft;

[Wherein said rotary shaft itself is constituted to be magnetic flux interrupting means made of a non-magnetic material.]

Kitazawa, JP 09065617 does not expressly disclose the bracketed material. Mimura, JP 02099399 discloses use of non-magnetic shaft for the purpose of preventing cross talk, see abstract. At the time the invention was made, it would have been obvious to a person of ordinary skill in the art to make the shaft of Kitazawa, JP 09065617 out of non-magnetic material. One of ordinary skill in the art would have been motivated to do this to prevent or reduce cross talk.

Re claim 4, note shield cover 30 as shown in figure 6 of Kitazawa, JP 09065617, which is inherently a high-permeability magnetic bypass member as evidenced by the concentration of magnetic flux lines.

As to claim 7, note that Kitazawa, JP 09065617 refers to turning angle detector (consisting of 8, 9 and 10) as a resolver in the abstract.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David W. Scheuermann whose telephone number is (571) 272-2035. The examiner can normally be reached on Monday through Friday from 8:00 am to 4:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Darren Schuberg can be reached at (571) 272-2044. The fax phone

Application/Control Number: 10/665,115

Art Unit: 2834

numbers for the organization where this application or proceeding is assigned is (703) 872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (571) 272-1562.
